

**Amendments to the Claims:**

This listing of claims will replace all prior version, and listings, of claims in the application:

1. (Currently Amended) A pack of barriers for use in relation to an eye contacting optical testing apparatus, comprising a first backing sheet on which are removably attached a plurality of barriers of substantially transparent film each having dimensions comparable to those of an eye-contacting surface of a head of a probe of the optical testing apparatus, a surface of the substantially transparent film adjacent the first backing sheet being sterile and the alternative surface of the substantially transparent film being provided with a peelable adhesive, and a second backing sheet to which the plurality of barriers and the first backing sheet are adhered by the peelable adhesive, wherein the first backing sheet is provided with locating means for locating the head of the probe of the optical testing apparatus.

Claim 2 (Cancelled).

3. (Currently Amended) A pack of barriers as claimed in claim [[2]] 1 wherein the locating means comprises coloured markers.
4. (Previously Presented) A pack of barriers as claimed in claim 3 wherein the locating means comprises a series of coloured rings each ring having a perimeter substantially coincident with that of the head of the probe of the optical testing apparatus.
5. (Previously Presented) A pack of barriers as claimed in claim 1 wherein the first backing sheet is provided with weakened lines to enable a portion of the first backing sheet surrounding one or more barriers to be removed by tearing

of the first backing sheet along the weakened lines.

6. (Previously Presented) A pack of barriers as claimed in claim 5 wherein the weakened lines are provided in the form of perforations.
7. (Currently Amended) A pack of barriers as claimed in claim 1 wherein each barrier is provided with one or more tabs for easy removal of the barrier.
8. (Currently Amended) A pack of barriers as claimed in claim 7 wherein the tabs are provided with an adhesive substance for retaining the barrier onto the head of the probe.
9. (Currently Amended) A sheet of barriers for use in relation to an eye contacting optical apparatus comprising a plurality of pieces of substantially transparent material removably attached to a backing sheet, the pieces having dimensions substantially similar to those of a probe head of the eye contacting optical apparatus, the pieces having at least one sterile surface being in contact with the backing sheet, wherein the backing sheet is removed from each piece to reveal the sterile surface and the backing sheet is provided with locating means for locating the head of the probe of the optical testing apparatus.
10. (Currently Amended) A sheet of barriers as claimed in claim 9 wherein ~~the a~~ surface of each piece of substantially transparent material ~~opposing the at least one sterile surface~~ is provided with a peelable adhesive.
